

<b>Preface</b>	1	<b>Chapter 8 . Voice over IP (VoIP)</b>	221	<b>Chapter 3 . Information Gathering</b>	49	<b>Mastering the Metasploit CLI (MSFCLI)</b>	144	<b>Chapter 10 . BackTrack Forensics</b>	289
		Introduction	222	Introduction	50	Mastering Meterpreter	148	Introduction	290
<b>Chapter 1 . Up and Running with BackTrack</b>	7	Using Svmmap	223	Service enumeration	50	Metasploitable MySQL	151	Intrusion detection and log analysis	290
Introduction	8	Finding valid extensions	225	Determining the network range	54	Metasploitable PostgreSQL	154	Recursive directory encryption/decryption	295
Installing BackTrack to a hard disk drive	8	Monitoring, capturing and eavesdropping on VoIP traffic	228	Identifying active machines	58	Metasploitable Tomcat	158	Rescanning for signs of rootkits	300
Installing BackTrack to a USB drive with persistent memory	13	Using VoIPong	232	Finding open ports	59	Metasploitable PDF	160	Recovering data from a problematic source	303
Installing BackTrack on VirtualBox	16	Mastering UCSniff	234	Operating system fingerprinting	62	Implementing the browser_autopwn module	163	Retrieving a Window password	307
Installing BackTrack Using Vmware Tools	21	Mastering Xplico	240	Service fingerprinting	63	<b>Chapter 6 . Privilege Escalation</b>	167	Resetting a Windows-password	311
Fixing the splash screen	23	Capturing SIP authentication	242	Threat assessment with Maltego	65	Introduction	168	Looking at the Windows registry entries	313
Changing the root password	23	Mastering VoIP Hopper	244	Mapping the network	70	Using impersonating tokens	168		
Starting network services	24	Causing a denial of service	246	<b>Chapter 4 . Vulnerability Identification</b>	77	Local privilege escalation attack	171	<b>Conclusion</b>	315
Setting up the wireless network	26	Attacking VoIP using Metasploit	247	Introduction	78	Mastering the Social-Engineering Toolkit (SET)	172		
		Sniffing DECT phones	249	Installing, configuring, and starting Nessus	79	Collecting victims' data	179		
		<b>Chapter 9 . Password Cracking</b>	253	Nessus – finding local vulnerabilities	82	Cleaning up the tracks	181		
		Introduction	254	Nessus – finding network vulnerabilities	86	Creating a persistent backdoor	183		
<b>Chapter 2 . Customizing BackTrack</b>	29	Online password attacks	255	Nessus – finding linux-specific vulnerabilities	91	Man-in-the-middle attack (MITM)	186		
Introduction	30	Cracking HTTP passwords	259	Nessus – finding Windows-specific vulnerabilities	95				
Preparing kernel headers	30	Gaining router access	263	Installing, configuring, and starting OpenVAS	99				
Installing Broadcom drivers	31	Password profiling	267	OpenVAS – finding local vulnerabilities	106	<b>Chapter 7 . Wireless Network Analysis</b>	191		
Installing and configuration ATI video card drivers	34	Cracking a Windows password using John the Ripper	274	OpenVAS – finding network vulnerabilities	112	Introduction	192		
Installing and configuration NVIDIA video card drivers	38	Using dictionary attacks	275	OpenVAS – finding Linux-specific vulnerabilities	117	Cracking a WEP wireless network	192		
Applying updates and configuring extra security tools	41	Using rainbow tables	279	OpenVAS – finding Window-specific vulnerabilities	122	Cracking a WPA/WPA2 wireless network	197		
Setting up ProxyChains	43	Using NVIDIA Compute Unified Device Architecture (CUDA)	281	<b>Chapter 5 . Exploitation</b>	129	Automating wireless network cracking	200		
Directory encryption	45	Using ATI Stream	284	Introduction	130	Accessing clients using a fake AP	203		
		Physical access attacks	287	Implementing exploits from BackTrack	130	URL traffic manipulation	206		
				Installing and configuring Metasploitable	133	Port redirection	207		
				Mastering Armitage – the graphical management tool for Metasploit	138	Sniffing network traffic	209		
				Mastering the Metasploit Console (MSFCONSOLE)	141	Access. g an e-mail by stealing cookies	214
