About the TV series (from Wikipedia): "Planet Earth is a 2006 British television series produced by the BBC Natural History Unit... The series comprises eleven episodes, each of which features a global overview of a different biome or habitat on Earth."

Planet Earth: A study guide to the BBC natural history series is a unique new resource. It has 11 units, each based on an episode of the award-winning BBC series *Planet Earth*. Each unit helps to increase students' understanding of the main themes of the episode. Themes focused on in the book and TV series include adaptation, evolution, reproduction, the food chain, climate change and animal classification.

Each episode and unit looks at a different biome or habitat, including:

- rivers
- caves
- deserts
- the poles
- plains and grasslands
- jungles and forests
- shallow seas
- deep oceans.

At the beginning of the course are key knowledge and skills goals and a short introductory unit.

At the end of each unit are skills-development activities and additional reading texts about relevant topics and similar issues facing Myanmar today. Each unit also has a English-Myanmar glossary of key words.

It is perfect for use in an English class, or in a social science or science lesson.

Planet Earth: A study guide to the BBC natural history series contains an answer key and can be used for self study or classroom use.
